

Personal Assistant with LLM

Pip - Personal Tutor for Kids

— ABOUT THE PROJECT

The need. Children aged 7-11 doing homework alone get frustrated and give up, and parents can't tell how they're really coping.

What it is. Pip is a robot that tutors children in English or Math with an interactive face to keep the child engaged, paired with a parent app for setup, materials and progress.

1 Voice Q&A tutoring

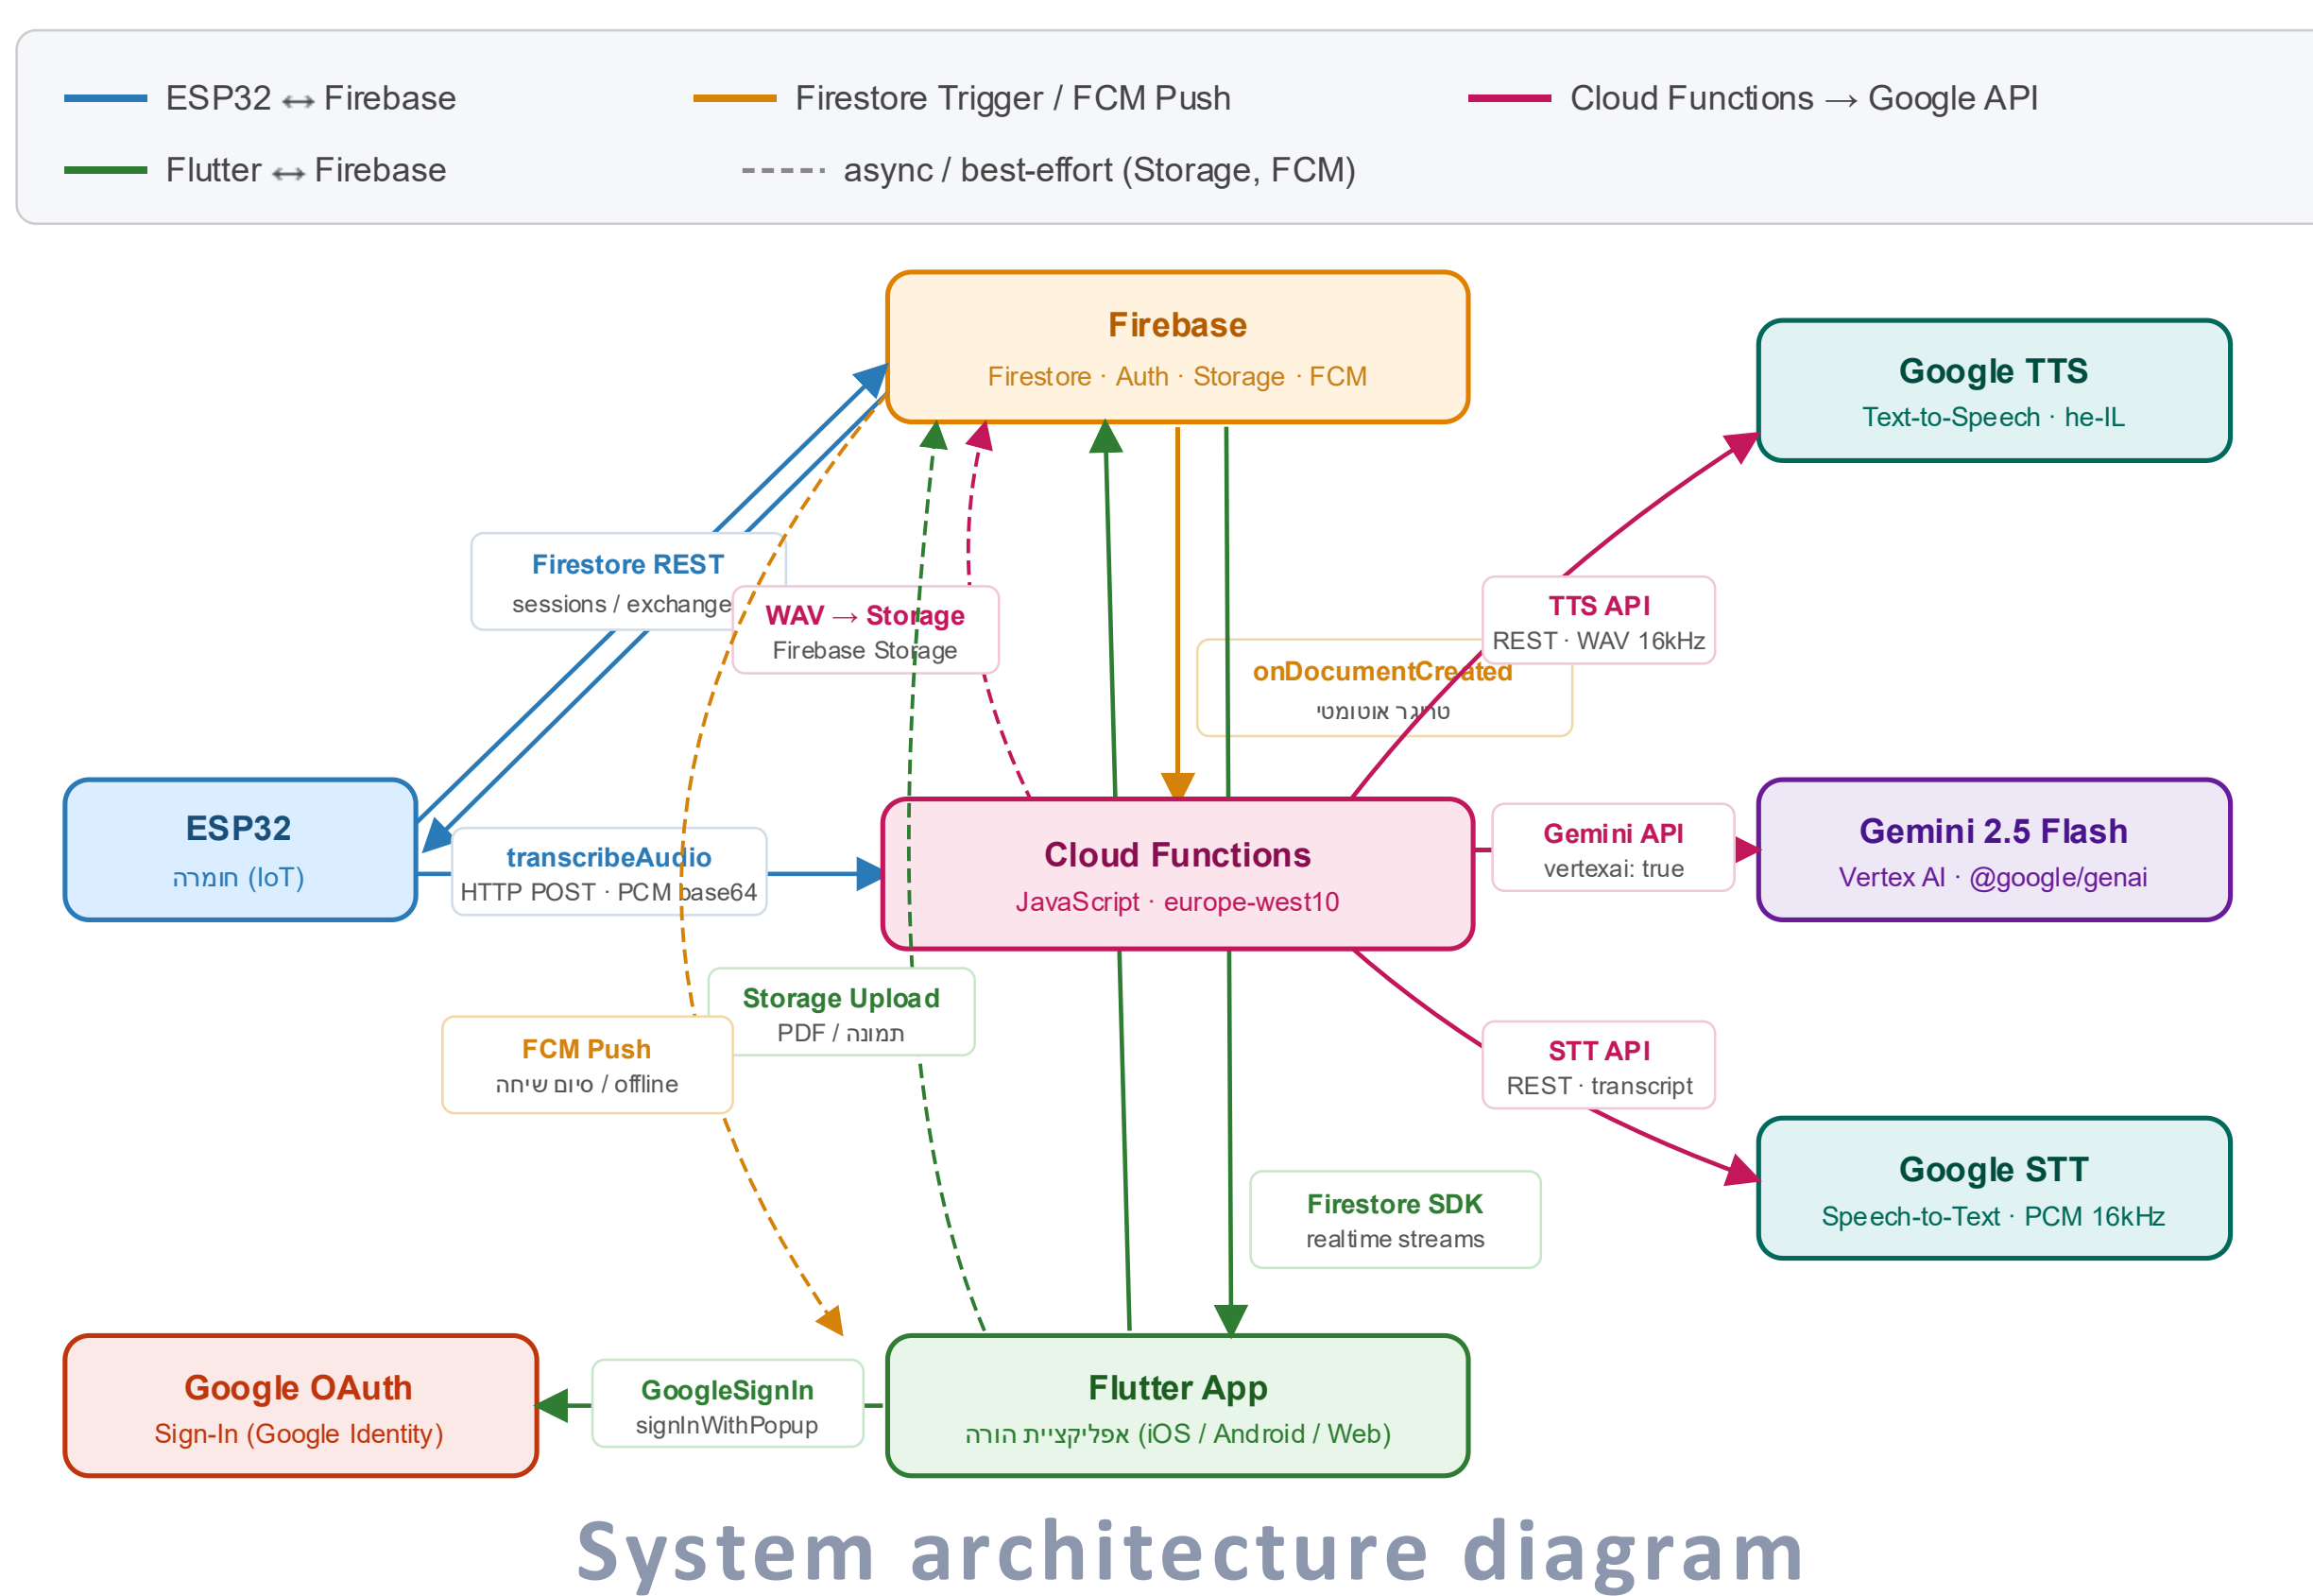

Bilingual hint-then-answer feedback powered by Google Gemini.

2 Interactive face

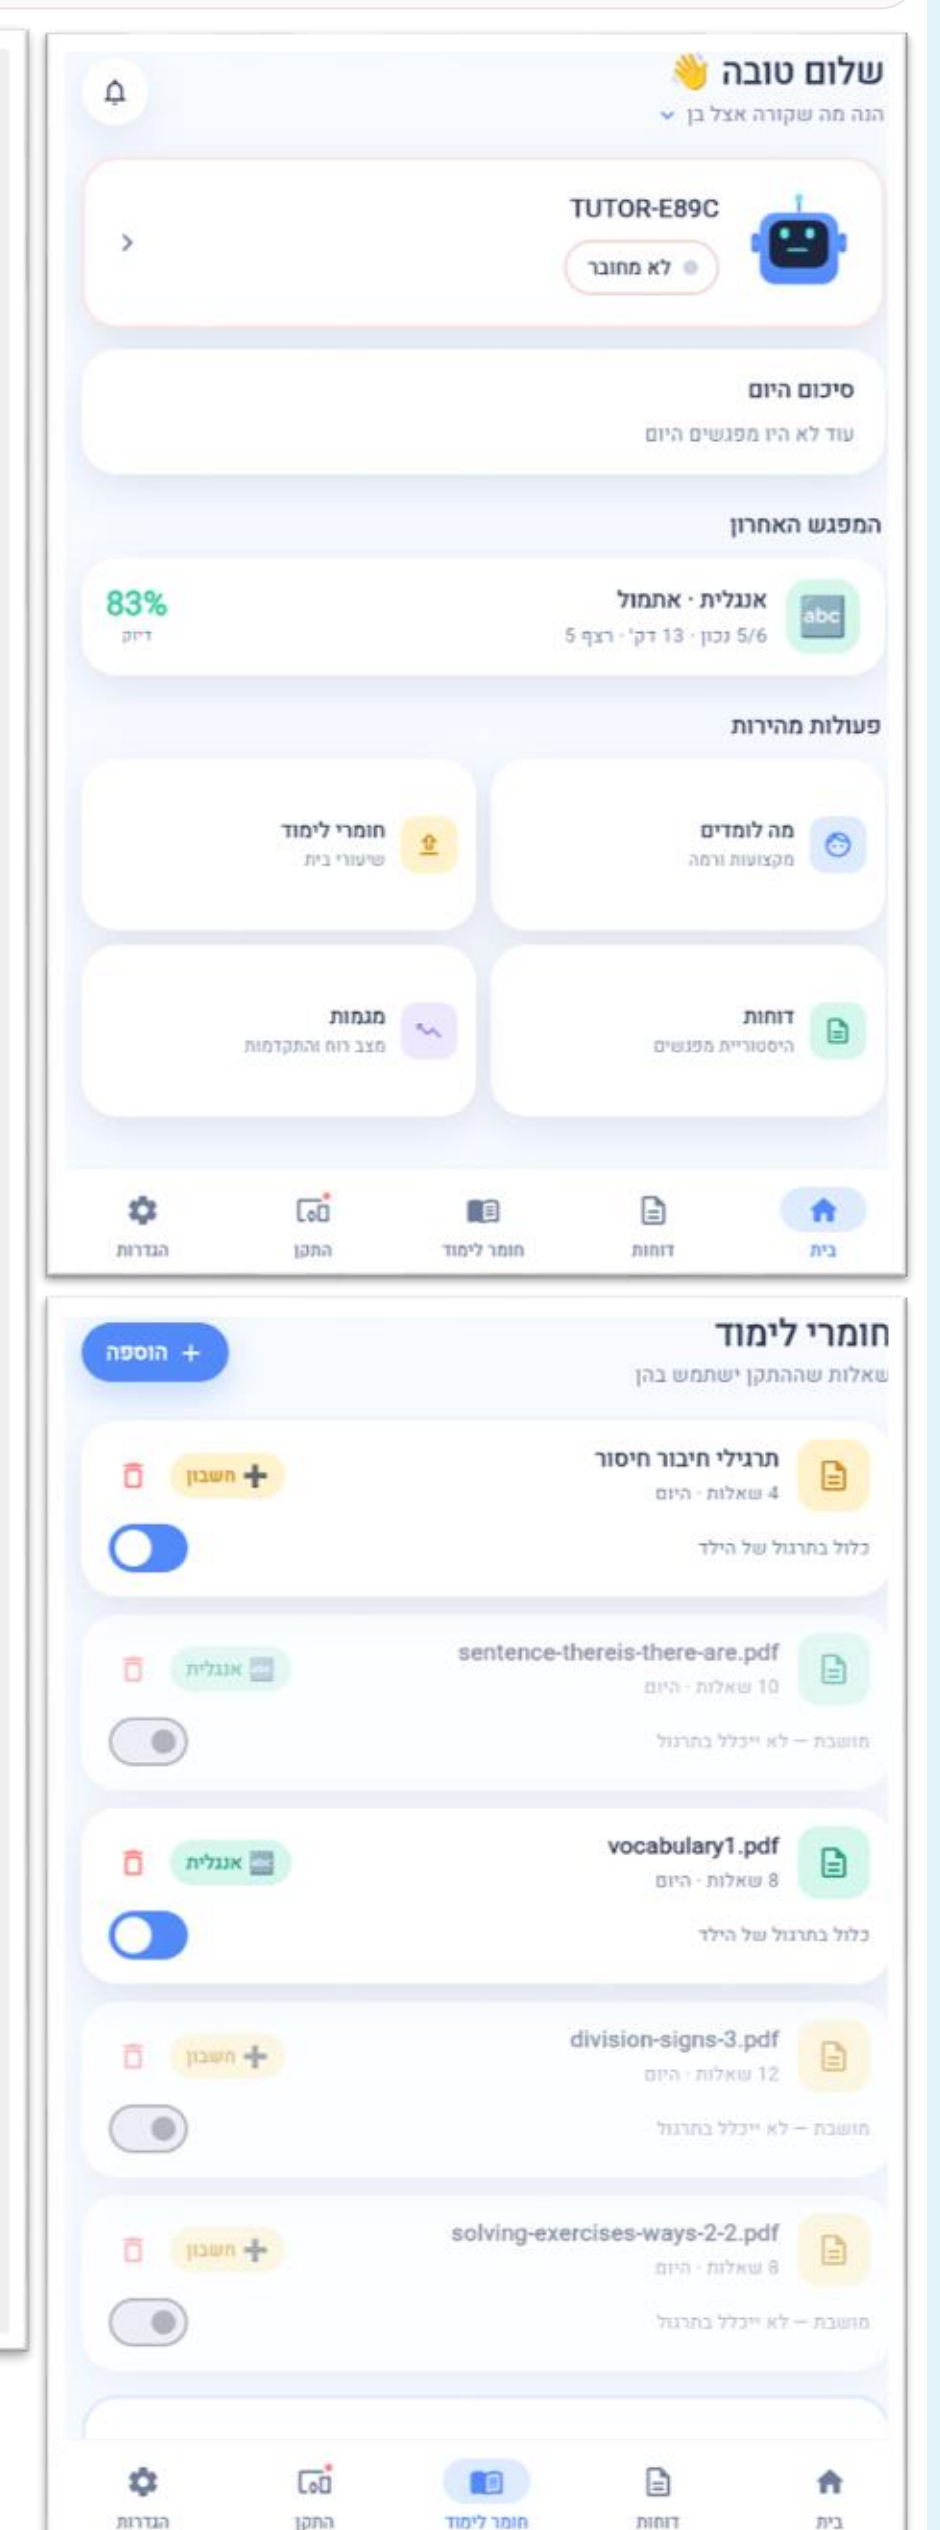

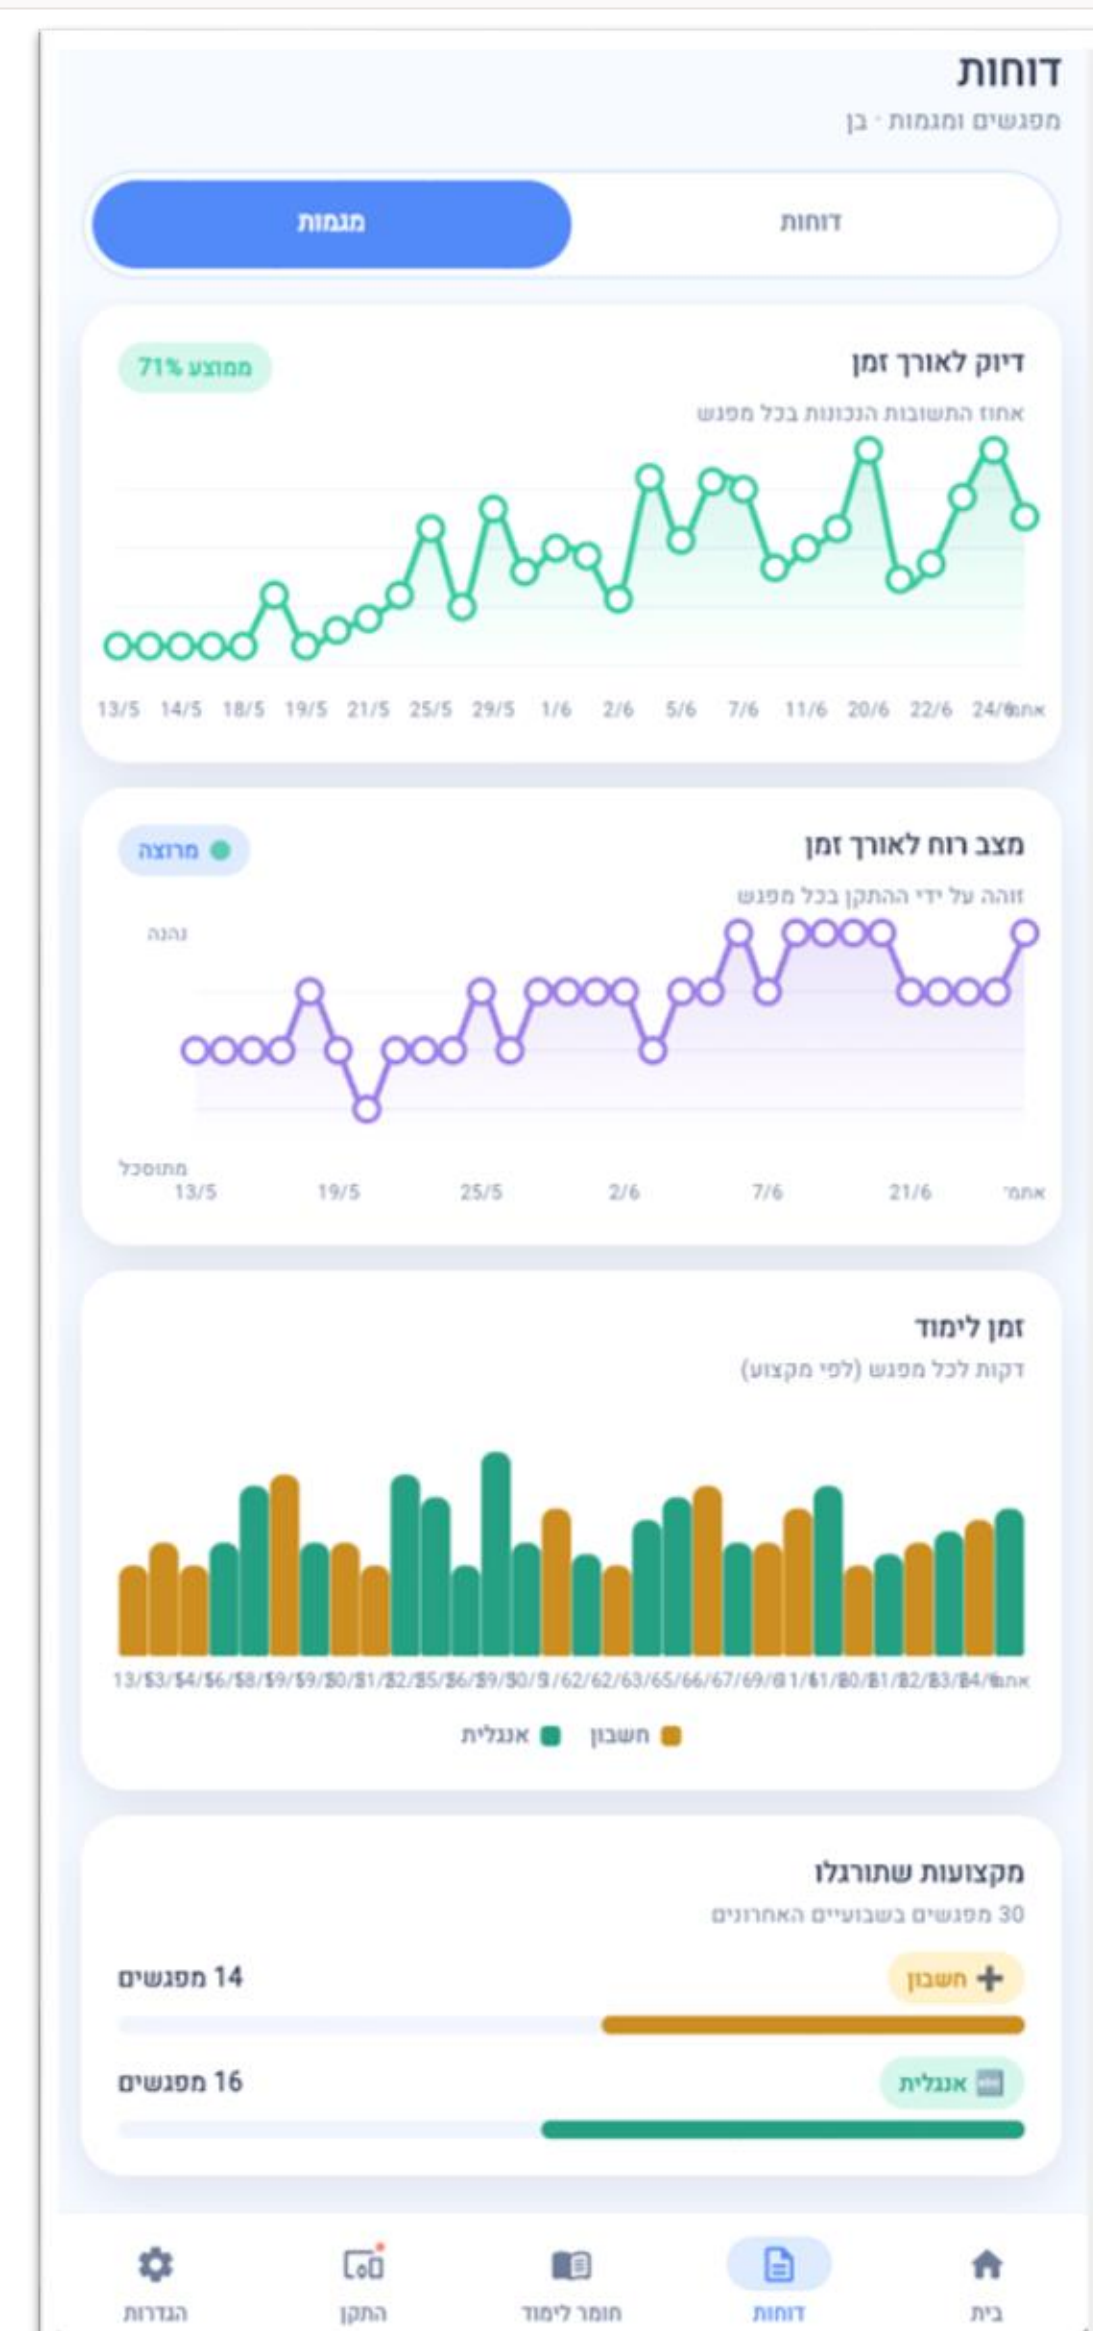

An expressive, animated face reacts to your child's mood, keeping them engaged.

3 Parent app

Set up the child, upload homework, and review mood & accuracy reports.

Physical prototype
